

GRL Engineers Celebrate 30th Anniversary

ADSC Technical Affiliate members, GRL Engineers, Inc., Cleveland, Ohio, celebrated their 30th anniversary on June 16, 2006. GRL specializes in analyzing and testing the safety of building foundations using the "dynamic method." The research on this then revolutionary method took place in the Civil Engineering Department of Case Western Reserve University in the 1960s.

To commemorate their anniversary, a special celebration on June 16th included an afternoon of presentations highlighting GRL's development from the early Case research to where the firm is today. In appreciation of the opportunities provided and the basic research supported by Case Institute of Technology, GRL and their sister company, Pile Dynamics, Inc., made a contribution to the Structures Laboratory of the Civil Engineering Department on that occasion.
