DYNAMIC STUDIES ON THE BEARING CAPACITY OF PILES

Volume II

Final Project Report of Phase II

July 1, 1968

by

G. G. Goble

J. J. Tomko

F. Rausche

P. M. Green

This research was sponsored by the Ohio Department of Highways and the Bureau of Public Roads. The opinions, findings and conclusions expressed in this publication are those of the authors and not necessarily those of the State or the Bureau of Public Roads.

TABLE OF CONTENTS

Introduction to Experimental Results	1
Model Pile Test in Sand	2
Model Pile Test in Silt	37
Model Pile Test in Silt and Clay	60
Full Scale Pile	109

INTRODUCTION TO EXPERIMENTAL RESULTS

During the course of this project a considerable number of piles of both reduced and full scale have been tested statically and dynamically. Some of these tests have been reported in Reference 1. The results of all of those test piles which are complete are presented here. A complete set of data is considered to be one which contains a static load test and a set of dynamic measurements made during driving. This rather extensive collection of static and dynamic measurements could be of use to other investigators.

The equipment used in driving the small scale piles and in making the dynamic measurements is described in Reference 1 and in Volume 1 of this report. The dynamic measurements were digitized manually and recorded on punched cards. The data was then analyzed by digital computer and the drawings included here were made automatically. The upper curves give the variation with time of acceleration, velocity and displacement at the top of the pile. The acceleration is the measured value obtained from the oscillograph record. Velocity and displacement were obtained by integration of the acceleration record by digital computer. The lower curves give the measured force at the top of the pile and the predicted static resistance calculated from equation 1, Volume I of this report. This calculation of the resistance neglects the velocity dependent terms and is not meaningful over the early portion of the record.

The digitized results are available on punched cards and, of course, in this form are more accurate than can be obtained on the curves given here.
